

Nearpod is an app that allows teachers to share presentations that they have created with their students. They can access almost all of the features for free and those features create an immersive presentation for students. Teachers can monitor attendance on this app as well as make sure at students are understanding the material that they are presenting over. Teachers can ask open-ended questions, true or false questions, have students complete quizzes, draw anything, and make them complete a poll. Once these things are complete they can share the results with the whole class or share just one person's response. This would be a great app in the classroom because it can be accessed not only on the iPads but on the chromebooks as well which means it can be used throughout the school. Students can sign in with their google account and crate presentations of their own and then share them with the class when it's time to present. This app will also cut down on the time it takes to grade each individual test and assess the progression and comprehension level of each students. Teachers can also attach websites to slides so that students can explore them at their own pace. Teachers can also attach PDF files to the slides so that students can view them as necessary. Overall this is a great app for the classroom.
